# Initial Data Exploration

As my masters degree is almost done, I need to focus on the skills I need to secure a job here in Latvia. I wish to be a data analyst, scientist, or engineer and since there are more entry points as a data analyst, the skills in the class are the ones I need to showcase to transition my career into Data. Data visualizations have been an afterthought since I have been focusing on manipulating data or applying algorithms in the other class as shown in Figure 1. Since data analyst job postings include Tableau or Power BI, I needed to borrow fiancée's Windows laptop to run Power BI since both softwares don't run on Linux or MacOS. The quick interactions and changes with using Power BI made it easier to handle for visualizations since Streamlit with python is more of a challenge to make graphical changes.

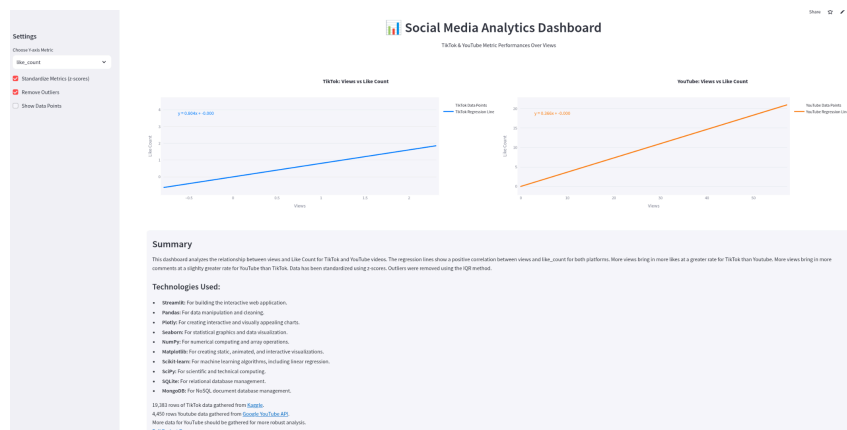

Figure 1. Dashboard created for Big Data Course Project using Streamlit and Jupyter notebooks

Many of my other assignments I have focused on social media since it is related to my masters thesis, though since I was an educator I chose the “Twelve Year Guardian League Table” dataset provided for us. Figure 2 shows an initial view of the dataset where if I was an educator

the metric I would be looking at is Student to Staff Ratio, but since I will be needing to think of stakeholders objectives the metric might be irrelevant.

| 1  | Year | Rank Institution | Satisfied with Course | Satisfied with Teaching | Satisfied with Feedback | Student to Staff Ratio | Spend per Student | Average Entry Tariff | Value Added Score | Career after 15 months | Continuation | Guardian Score |
|----|------|------------------|-----------------------|-------------------------|-------------------------|------------------------|-------------------|----------------------|-------------------|------------------------|--------------|----------------|
| 29 | 2018 | 81 Aberystwyth   | 92.6                  | 90.8                    | 79.3                    | 16.4                   | 4.6               | 107.3                | 3.8               | 67.7                   |              | 53.8           |
| 30 | 2017 | 108 Aberystwyth  | 82.4                  | 85.2                    | 69.9                    | 19.1                   | 4.7               | 289.8                | 3.5               | 62.6                   |              | 43.6           |
| 31 | 2016 | 110 Aberystwyth  | 82.4                  | 85.8                    | 65.3                    | 17.9                   | 4.4               | 312.3                | 3.9               | 53.3                   |              | 44.2           |
| 32 | 2015 | 106 Aberystwyth  | 82.1                  | 84.2                    | 65.1                    | 20.0                   | 4.5               | 325.0                | 4.5               | 54.0                   |              | 43.8           |
| 33 | 2014 | 88 Aberystwyth   | 88.4                  | 87.7                    | 68.9                    | 19.4                   | 4.8               | 327.0                | 3.3               | 53.6                   |              | 49.5           |
| 34 | 2013 | 81 Aberystwyth   | 89.0                  | 89.0                    | 70.0                    | 19.1                   | 4.4               | 305.0                | 3.9               | 47.0                   |              | 49.0           |

Figure 2. Initial view of data in LibreOffice

Clicking through the pages of the sheet I'm not sure how that tables interact and would not even be sure how it would be handled in a dataframe with jupyter notebooks. Loading data into Power BI, it triggers Power Query to deal with errors as shown in figure 3. Though looking at figure 4, the majority are from the column careers after 15 months which were originally empty. I made the decision to keep rows with the errors since it would remove the other data in the row. Figure 5 shows where it is to remove duplicates for identical rows in Power Query which was done to make sure that no value was being double counted in calculations.

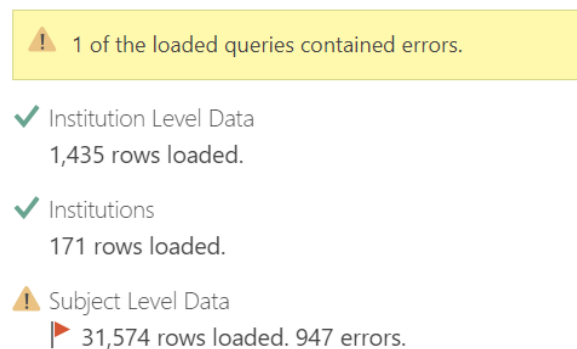

Figure 3. Errors loading into Power BI with Power Query

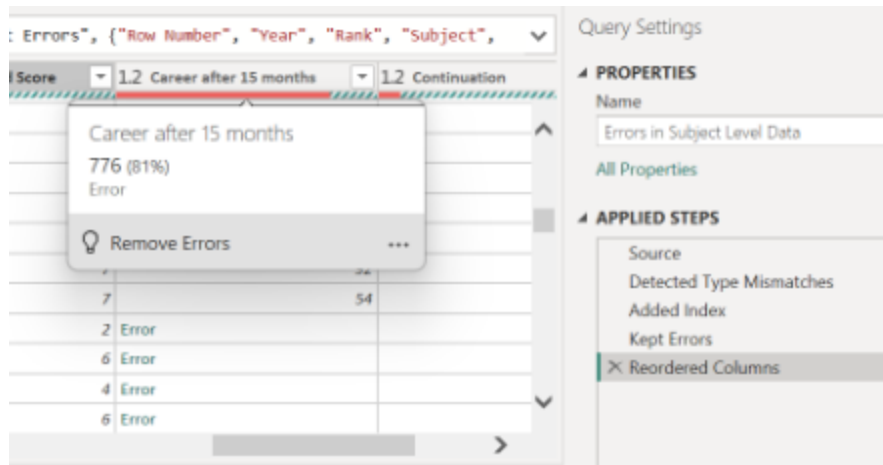

Figure 4. Majority of Errors form career

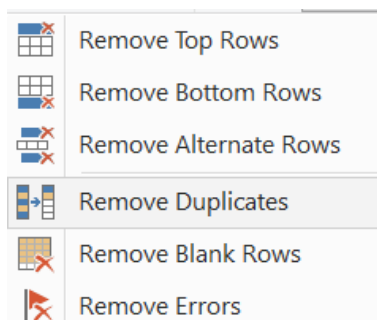

Figure 5. Remove Duplicates

Closing and applying the changes to return to Power BI. As suggested from our guest lecture by Vjačeslavs Matvejevs, I went to check the model view to get a better understanding of the data relationship as shown from figure 6. To prevent a many to many relationship between a Subject Level Data to Institution Level Data table, there was a years table created. Table of Subjects is not connected and the table of all Institutions has a one to many relationship to Competitor Institutions. Figure 7 shows what items are in Competitor Institutions, so columns are renamed to directly connect to Institution Level Data. Figure 8, shows the adjustments made for their competing institutions to be directly connected to Institution Level Data.

## Understand the Business Requirements and Identify Stakeholders

As previously stated, I could take the viewpoint as an educator looking to teach at a university. I might be interested in it but this is meant to present to a stakeholder that may be for a university admin or a student looking to enroll in a university. The data set is set up to compare competitors of University of the West of England (UWE Bristol, UWE) as shown in figure 9. I'm assuming that students are asked to rank the universities they want to attend. Highly desired institutions are on the shortlist, longlist are those that are a lower priority, and UWE is included

on their list. Though this should have been a meeting with the stakeholder, I went with ChatGPT to decide what the data meant. Let's make the stakeholder is admin for UWE and a requirement is how and to whom the school should advertise or how it compares to the its competition.

|    | Institution      | Competitor |
|----|------------------|------------|
| 1  | UWE Bristol      | UWE        |
| 2  | Nottingham Trent | Shortlist  |
| 3  | Portsmouth       | Shortlist  |
| 4  | Oxford Brookes   | Shortlist  |
| 5  | Cardiff          | Shortlist  |
| 6  | Plymouth         | Shortlist  |
| 7  | Gloucestershire  | Shortlist  |
| 8  | Bournemouth      | Shortlist  |
| 9  | Bath Spa         | Shortlist  |
| 10 | Brighton         | Shortlist  |
| 11 | Coventry         | Longlist   |
| 12 | Nottingham       | Longlist   |
| 13 | Bristol          | Longlist   |
| 14 | Newcastle        | Longlist   |
| 15 | Huddersfield     | Longlist   |
| 16 | Northumbria      | Longlist   |
| 17 | Liverpool        | Longlist   |
| 18 | De Montfort      | Longlist   |

Figure 9. Asking about competitors ChatGPT(2024)

My initial assumptions would be that rank is better across the board, along with cost, and satisfied with teaching a key performance metric, but researching is required since my assumptions are US based and biased. Research was conducted for student enrollment into UK institutions. According to a study (Wilkins and Huisman, 2010) 160 international students studying at a UK university were surveyed on their choices for choosing to study overseas. Improved employment prospects was a dominant factor to study overseas by 91% answered by the students as shown from figure 10. The same study also had 98% as the reputation of the university was a factor for students' choice of institution.

**Table 2.** Factors Influencing Students' Decision to Study Overseas (as Percentages)

| Factor                             | U/G<br>(n = 28) | P/G<br>(n = 132) | Chinese<br>(n = 60) | Indian<br>(n = 21) | European<br>(n = 40) | All students<br>(n = 160) |
|------------------------------------|-----------------|------------------|---------------------|--------------------|----------------------|---------------------------|
| Difficult to gain place at home    | 7               | 5                | 7                   | 0                  | 5                    | 6                         |
| Course not available at home       | 4               | 11               | 12                  | 19                 | 0                    | 10                        |
| Lower quality of education at home | 11              | 24               | 31                  | 19                 | 10                   | 22                        |
| Experience a different culture     | 79              | 93               | 86                  | 100                | 98                   | 90                        |
| Improve my English                 | 75              | 93               | 83                  | 9                  | 95                   | 89                        |
| Improve employment prospects       | 86              | 92               | 86                  | 100                | 95                   | 91                        |
| Higher quality education overseas  | 39              | 73               | 69                  | 81                 | 48                   | 67                        |
| Parental decision/influence        | 75              | 61               | 67                  | 57                 | 58                   | 63                        |
| Improve prospects for emigration   | 29              | 32               | 28                  | 33                 | 43                   | 32                        |

Note: U/G = undergraduate students; P/G = postgraduate students.

Figure 10. Table 2 from Wilkins and Huisman research (2010)

Another study (McManus, Haddock-Fraser and Rands, 2017) was conducted to investigate what factors are most important when choosing a university in the UK. This study found that factors such as league table ranking, employment prospects after graduation, and tuition fees are all important considerations for students. However, the importance of these factors can vary depending on whether the student is male or female, whether or not their parents attended university and if an international student. A case study (Rembielak, Rashid and Parlińska, 2020) about Polish students studying in British higher education institutes choose pull factors (reasons for choosing UK) compared to push factors (reason for leaving Poland). The pull factors noted were multicultural environment, reputation, improved employability, facilities, and scholarships.

Studies from the Quacquarelli Symonds (QS) a British company specializing in education and studying abroad also known for QS World University Rankings have recent surveys about students. Figure 11 shows that around the time the Covid Vaccine was released, some of the

most important factors for considering which country to study in were employment prospects and reputation of higher education institutions. An insight provided from 10,000 international students who graduated from 37 UK universities provided by QS (2024) over the past six years is shown in figure 12. 53% of respondents identified UK universities could improve in employment support.

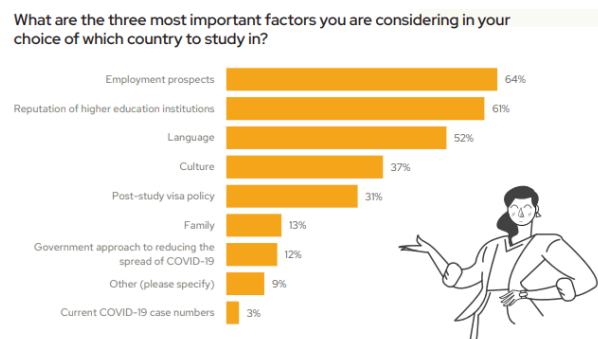

Figure 11. Survey of students from QS(2022)

Figure 12. Insights of International Graduate Outcomes 2024 from QS

After this research, I will be using rank and score as reputation and looking at the metric Career after 15 months to help target advertisements to international students against UWE competition. I will compare how UWE has fared against the competition from 2011 to 2024 to advertise and if/what improvements need to be made. Figure 8 allows the comparison to be done in detail by subject, though I will only look at institutions data. Since data was only up to 2022,

figure 13 shows the missing data of UWE and competition. Figure 14 shows it loaded into Power BI with it, then with Power Query the Table was stacked onto Institution Level Data.

| 1  | Year | Rank/Institution    | Satisfied with Course | Satisfied with Teaching/Feedback | Satisfied with Staff | Student to Staff Ratio | Spend per Student | Average Entry Tariff | Value Added Score | Career after 15 months | Continuation | Guardian Score |

Figure 14. Table created with missing data

After talking with the stakeholder and showing the research that was conducted, we agreed to table 1 as stakeholder concerns. Assuming that I can use rank and score as reputation.

| Stakeholder            | Concern   |
|------------------------|---|
| UWE admin              | How do we compare to our competing universities in rank, score, and career over the years 2011-2024? If/what needs improvement against competition? |
| International Students | Why should I choose to attend UWE?  |

Table 1. Stakeholder Concerns

## Visualize the Dataset to Answer Business Questions

I will be using averages across the years to make a numerical comparison against UWE and the competition. Creation of columns in the dataset is possible for aggregation, but Data Analysis Expressions (DAX) is able to do aggregation in Power BI. Figure 15 shows the start of the use of many aggregations since they can provide measures for the year.

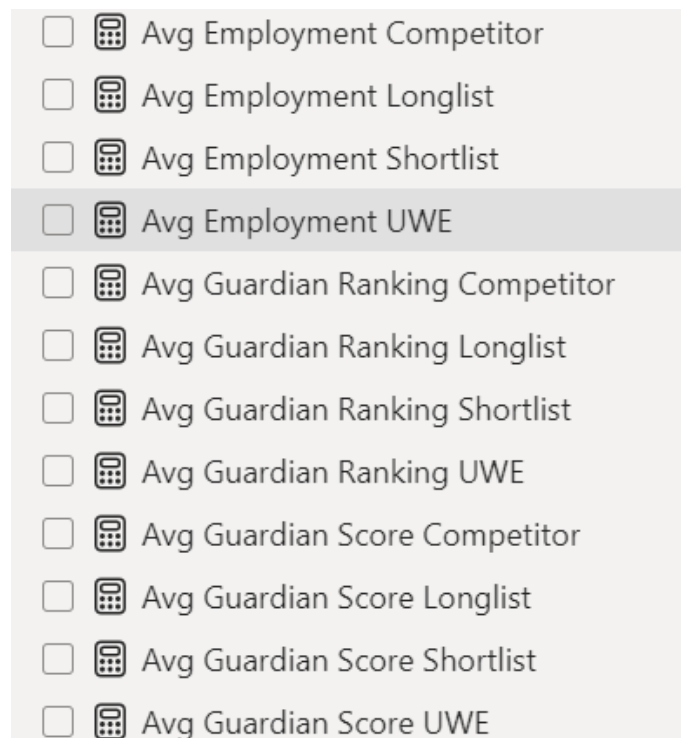

Figure 15. Several metrics created

Referring to course materials, line charts are used to show trends across continuous measurements. Since we will compare across years of the competition, line charts will be used. Figure 16 shows all competitors, those on the longlist and those on the shortlist against on the line all together. It is possible to focus the audience's attention while adjusting color and dashes, but there are lines overlapping and very close to each other. The choice was made to only compare one to one to have visual clarity along with DAX to enable toggling over choices.

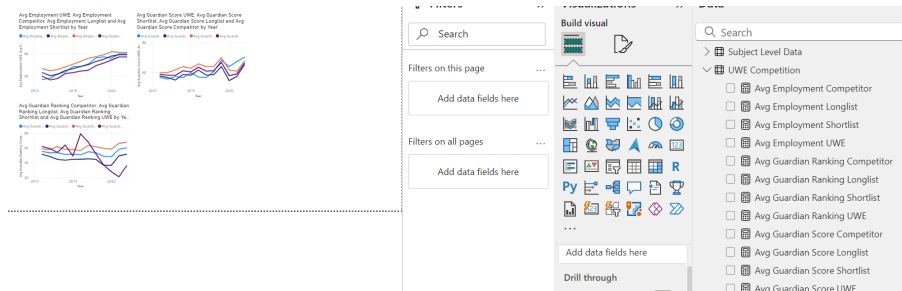

Figure 16. Comparing with all metrics

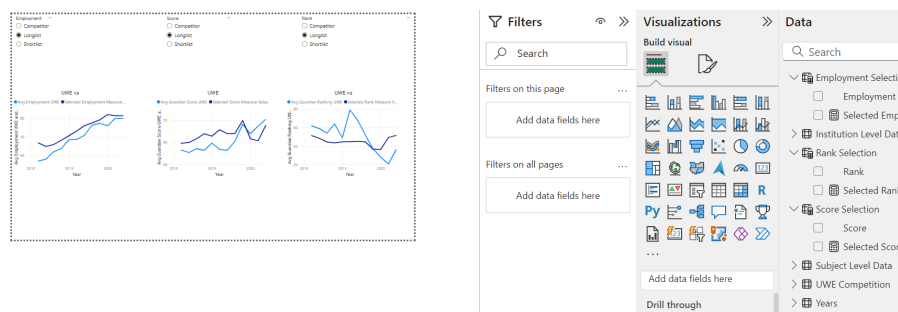

Figure 17. Adjustments to compare 1 to 1 dynamically

Since UWE colors are red, I could have used it as the UWE color of red but it may not be a great color throughout the whole dashboard since red does signal implicit themes. For accessibility, accessible default will be used throughout the dashboard. To show the competitor institutions, the competitor institution table was included as shown in figure 18. Figure 19 shows a multi card would not be suitable since the lack of clarity about the institution.

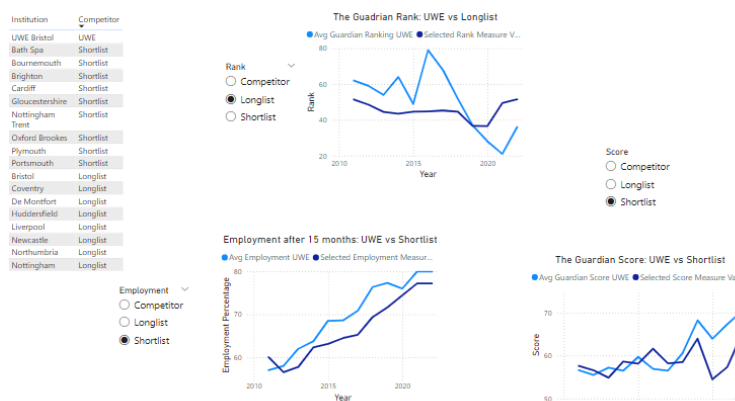

Figure 18. Table inserted to show competitors along with graph adjustments

|             |             |
|-------------|-------------|
| Bath Spa    | Institution |
|             | Shortlist   |
|             | Competitor  |
| Bournemouth | Institution |
|             | Shortlist   |
|             | Competitor  |
| Brighton    | Institution |
|             | Shortlist   |
|             | Competitor  |
| Bristol     | Institution |
|             | Longlist    |
|             | Competitor  |
| Cardiff     | Institution |
|             | Shortlist   |
|             | Competitor  |
| Coventry    | Institution |
|             | Longlist    |
|             | Competitor  |

Figure 19. Multicard for competitors

Figure 20 shows cards being constructed to display averages over the years depending on whichever clicker is chosen. A couple of Gestalt Principles and preattentive attributes were considered to adjust information to for presentation on the dashboard. Proximity, connection, and symmetry were to lay out employment, rank, and score to show cards and graphs are related to each other. Figure 21 using similarity and keeping accessibility in consideration, competition is displayed as a dashed line throughout the graphs. Titles, legend, and clicker are adjusted to be descriptive when choices are changed from DAX measurements. Spatial positioning was adjusted for cards with UWE and competition with left and right as shown in figure 22.

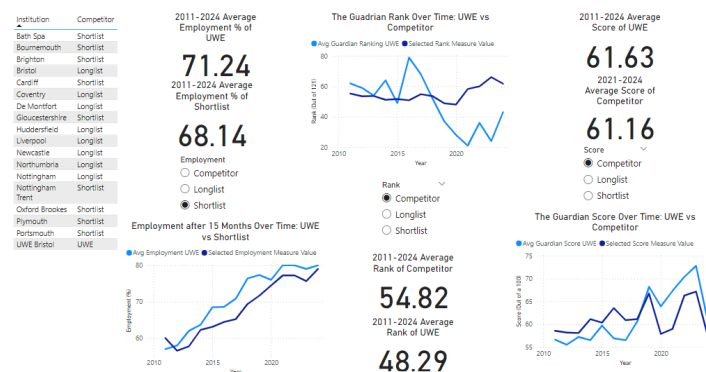

Figure 20. Cards to show average across all years

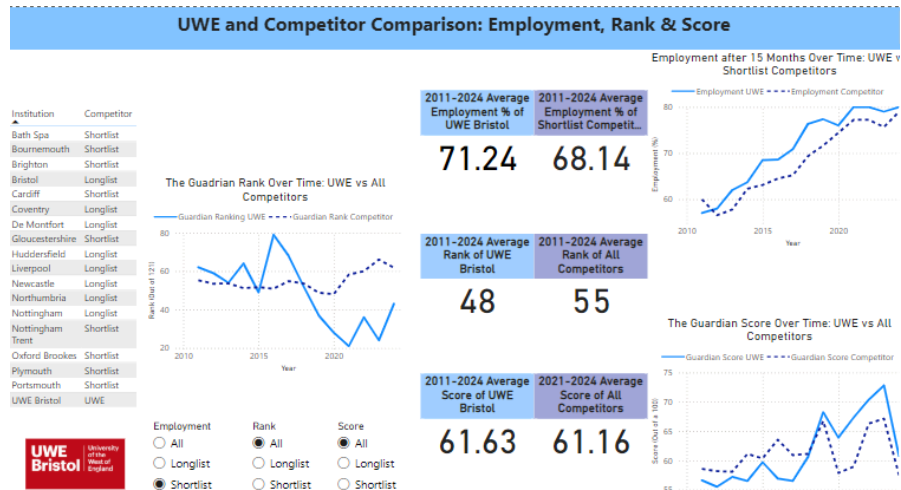

Figure 23. Title, colors, and UWE logo added, clickers aligned

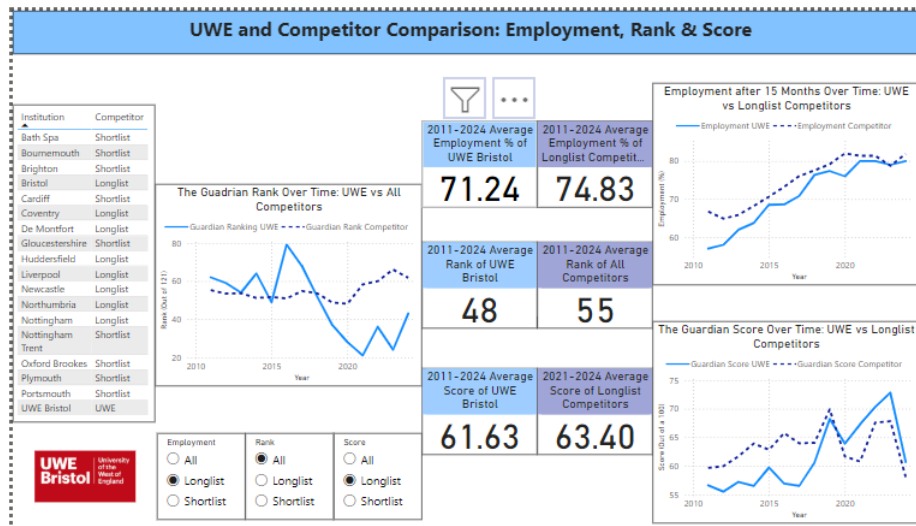

Figure 24. Enclosing objects

Figure 25 shows the background changed to be gray to reduce eye strain and improve contrast for the graphs with the colors present on it. All graphs were giving 4:3 ratios with the same width and length since not one singular graph is the focus.

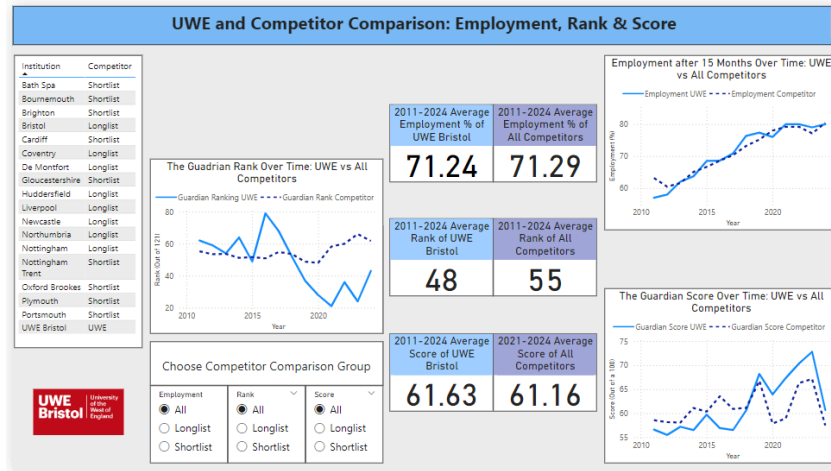

Figure 25. Background colors and making graph 4:3 ratios and title of clickers

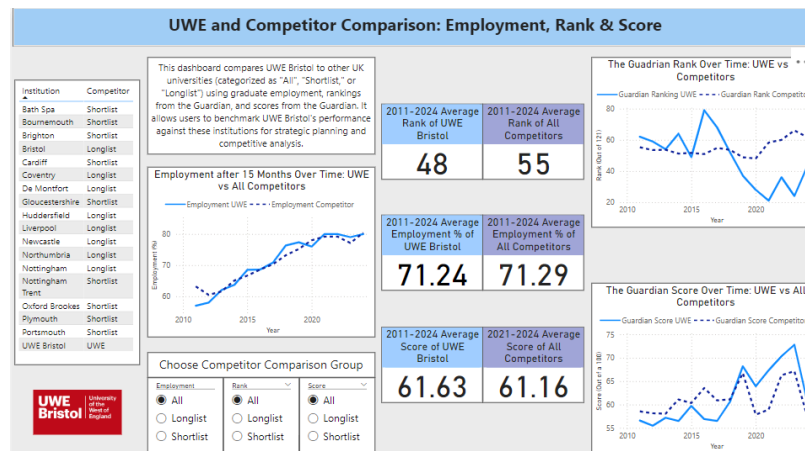

Figure 26. Possible final layout

Figure 26 shows a possible final layout of the dashboard. With it, it is time to think like a designer and consider the affordances with clicking on the dashboard. Clicking on graphs and tables has unintended filtering across graphs and cards. Figure 27 shows a portion of adjusting of interactions and only making sure clickers gives the user control to change. For the table, an invisible rectangle was placed on the table to still give the user a chance to reorder the list only as shown in Figure 28. Annotations may be put in the final version to visually put for positive and negative difference between competition, but due to time constraints it may be done later.

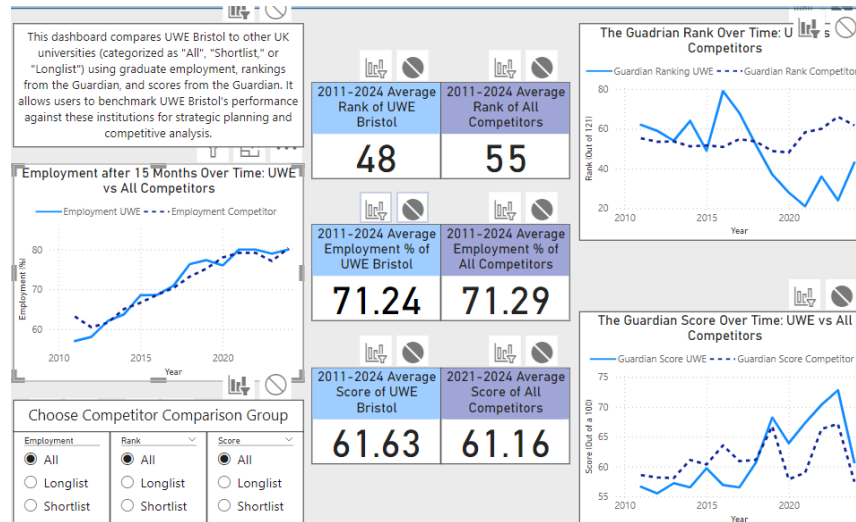

Figure 27. Disabling interactions

| Institution     | Compe     | *** |
|-----------------|-----------|-----|
| Bath Spa        | Shortlist |     |
| Bournemouth     | Shortlist |     |

Figure 28. Invisible rectangle over competitor table

At this point I was ready to show the client the dashboard from figure 29, but after writing my reflection and looking back on coursework I could not make a justification with why I have the graphs in their position. The original layout had me having the graphs stack, but figure 30 shows me a different layout that is more symmetrical. Figure 31 dashboard was created for symmetry along with grouping of values to corresponding graphs. Visually the table was adjusted to make it fit on the dashboard with all values. Later adjustments may be made for clarity for separation of values.

Figure 29. Possible final draft of dashboard

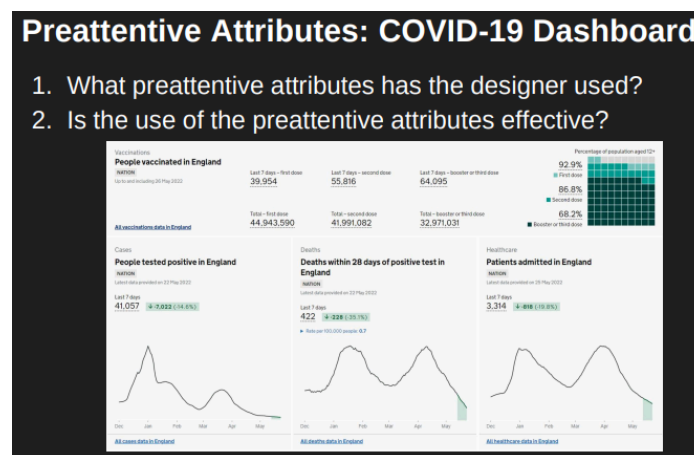

Figure 30. Slide from class presentation (Spiridovska, 2024)

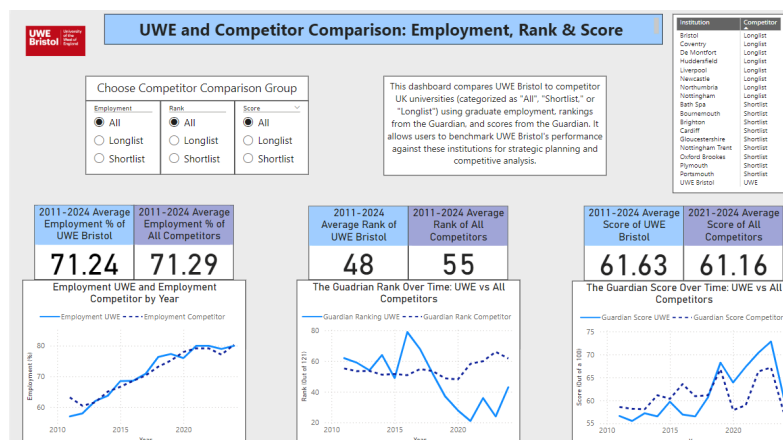

Figure 31. 2nd possible final draft of dashboard

Dashboards for figure 29 and 31 were both shown to the stakeholder, with the 2nd being acceptable in using.

## Develop a Narrative Telling a Story Around the Data

The presentation will be following the discovery journey method going through what I have reflected so far. The powerpoint will be developed and presented in later time so the final presentation may be slightly different. The following is the general flow of how the story will unfold and connect with thoughts being written down in a loose structure.

Intro: Prompting and asking why the audience chose this university or for undergrad. Might give possible reasons or even some of my own.

Setup scenario: How would UWE attract you (a UK university). UWE has a list of competitions which is shown from figure 28. May add how shortlist and longlist may be identified. Along with talking about data about the best UK universities ranking provided by The Guardian. We have data from 2011 to 2024, but first does it matter to use this data?

Research: Talk about research that is specific from the UK since we may have assumptions for Latvia and the US. Describe over the years from how reputation and employment matters across to international students, might be presented in a timeline. Using table 1 as what are stakeholder concerns after presenting to them.

Talking about data: Now looking at it, I will use annotations for the final draft to show the comparison of positive and negative differences. Descriptions will be added at bottom of the presentation for accessibility. Figure 32 shows vs shortlist competitors, UWE is better in these metrics. Figure 33 shows against all competition we are not the best. Figure 34 shows that actually those on the longlist are the better performing schools. This goes against an assumption I had that competition on the longlist were on lower ranking since they weren't as good, but might lower since they are a long shot of being accepted.

Recommendations for Future Improvements: In final section and show table 1 once again.

QA

A practice run through will be done after the presentation is created to see if the story is coherent and within the 10 minute time limit.

Figure 32. UWE vs shortlist Competitors

Figure 33. UWE vs All Competitors

Figure 34. UWE vs shortlist Competitors

## Identify Recommendations for Future Improvements

Looking at the data, employment is the metric that needs improving against our competitors since year over year we trade positions between the higher percentage. UWE should compare against longlist competitors since they are the better performing schools that are in consideration of prospective students. Dashboards could be created for employment and ranking based on subjects to see those below average of the institution and need improvement.

Targeting international students, advertising that for the past 7 years UWE has ranked higher against competing schools. On average UWE has better employment outcomes compared to institutions that were shortlisted since 2011. Though having a marketing team do focus testing to see what makes it sound more appealing.

## Final reflection

After reflecting about the final presentation and writing my thoughts down, colors can be different for “All”, “shortlist”, and “longlist”. An annotation of shaded areas between UWE and competitors to show when and by how much better/worse UWE is doing. Title needs to be adjusted for one graph and table may be adjusted to keep it small but show entries as distinct or might split into two tables. All these adjustments should make it more apparent for the viewer to understand the data quicker. Further iterations will be done to the dash by the time the presentation is done.
